PROCESS FLOW DOCUMENT

As-Is and To-Be | Rental Property Management System

Document Type	Process Flow — Current State, Gap Analysis, and Future State Redesign
Project	Rental Property Management System
Prepared By	Business Analyst, IT-PMO
Reviewed By	Head of Enterprise Architecture, IT-PMO
Date	April 2025
Version	1.0
Classification	Confidential, Restricted Distribution

This document maps the current state (As-Is) processes for rental property management, identifies gaps and inefficiencies, and presents the redesigned future state (To-Be) processes. It is structured for use by business analysts, developers, QA, UAT teams, and project stakeholders. Each section provides a high-level flow diagram followed by a step-by-step side-by-side comparison table so that any reader can identify differences at a glance.

1. Document Overview and How to Read This Document

This document covers five core process areas within the Property Management Division. For each process, the following is provided in order:

- A high-level flow diagram showing the As-Is steps in red and the To-Be steps in green, so the structural difference is visible immediately.
- A step-by-step side-by-side comparison table with the As-Is action, time, and issue on the left, and the To-Be action, time, and improvement on the right. Every row corresponds to the same logical step in the process.

The Gap Analysis in Section 9 consolidates all identified issues into a single reference. Section 10 provides quantified improvement targets based on observed baselines.

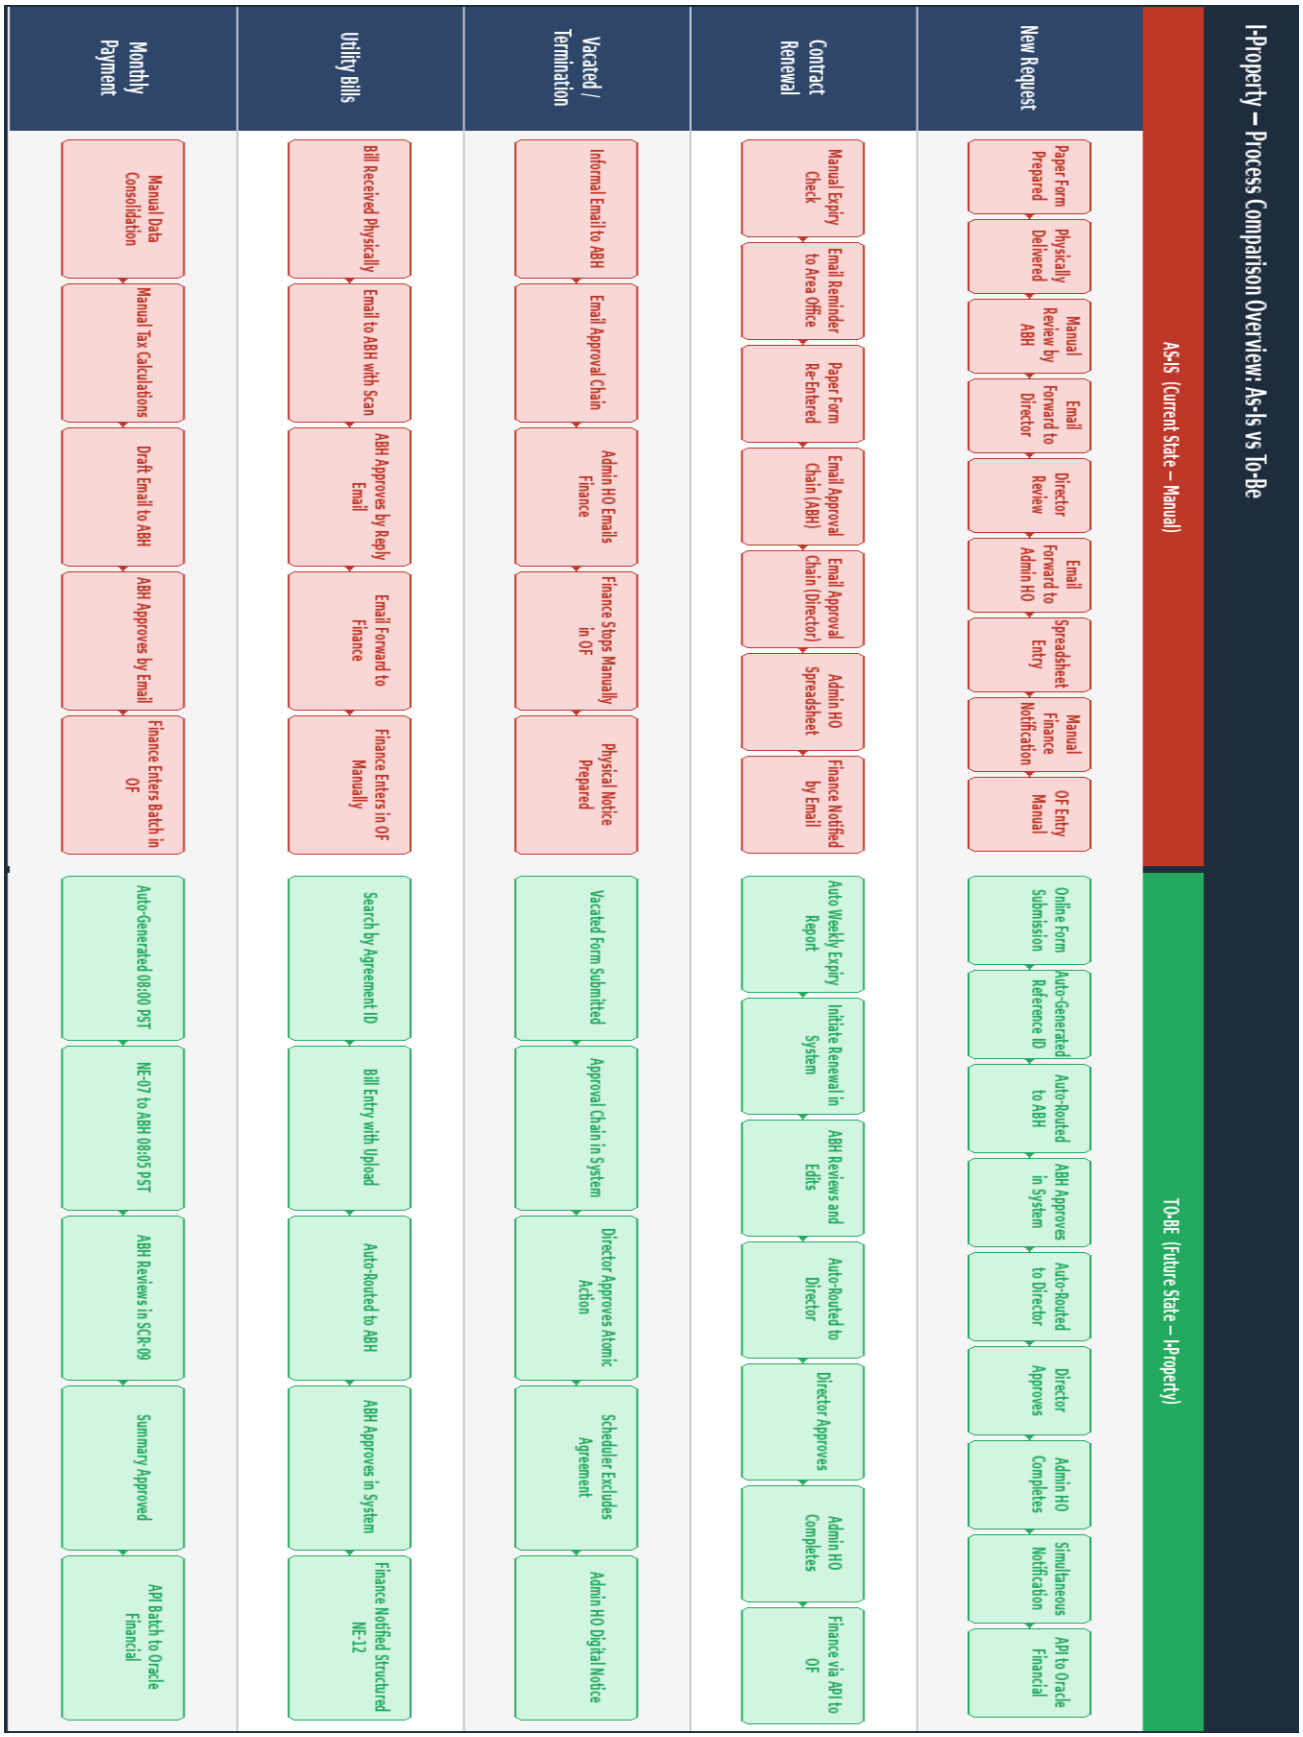
Audience	What to focus on	Key sections
Business Stakeholders	Master comparison (Section 3), flow diagrams, improvement targets	Sections 3, 4.1–8.1, 10
UAT Team	Step-by-step comparison tables — verify each To-Be step is implemented	Sections 4.2–8.2
Developers	To-Be steps, system actions, automated outputs, error conditions	Sections 4.2–8.2, Gap Analysis
QA Engineers	As-Is pain points vs To-Be expected outputs — basis for test case design	Gap Analysis (Sec 9), all 4.2–8.2
Product Owner	Full document — owns the process redesign decisions	All sections
Project Manager / PMO	Gap analysis, improvement targets, implementation notes	Sections 9, 10, 11

2. Scope and Process Areas

No.	Process	Description	Primary Actors
1	New Rental Request	Full cycle from request initiation through four-level approval to agreement completion and Oracle Financial setup.	Area Officer, ABH, Director, Admin HO, Finance
2	Contract Renewal	Identification of expiring agreements and renewal through the same approval chain.	Area Office, ABH/MR/ARH, Director, Admin HO, Finance
3	Vacated and Termination	Processing of a termination request including automated payment stop.	Area Admin, ABH, Director, Admin HO, Finance
4	Utility Bills Payment	Submission, validation, and approval of utility bills against active agreements.	Area Officer, ABH, Finance
5	Monthly Payment Processing	Month-end generation, approval, and transmission of the consolidated payment batch to Oracle Financial.	System, ABH/GM, Finance

3. Master Process Comparison — All Processes at a Glance

The diagram below shows all five process areas side by side. As-Is steps are shown in red on the left of each row. To-Be steps are shown in green on the right. This single view is intended as a reference for any stakeholder who needs to understand the scope of change across the entire project.



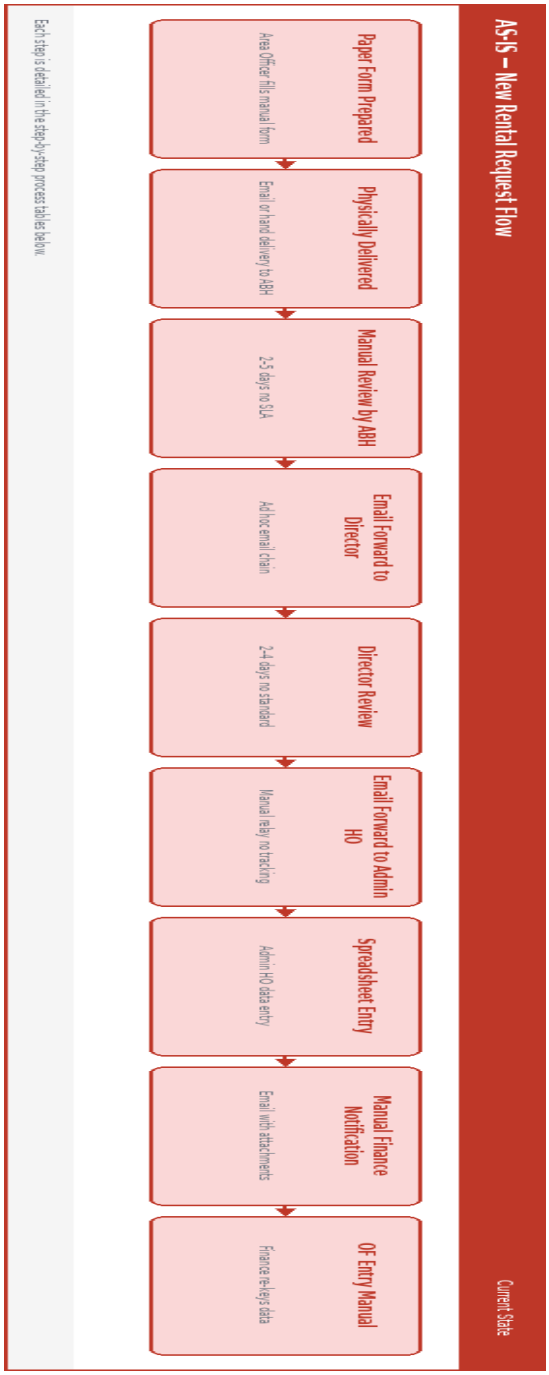
The detailed step-by-step comparison for each process follows in Sections 4 through 8.

4. Process 1 — New Rental Request

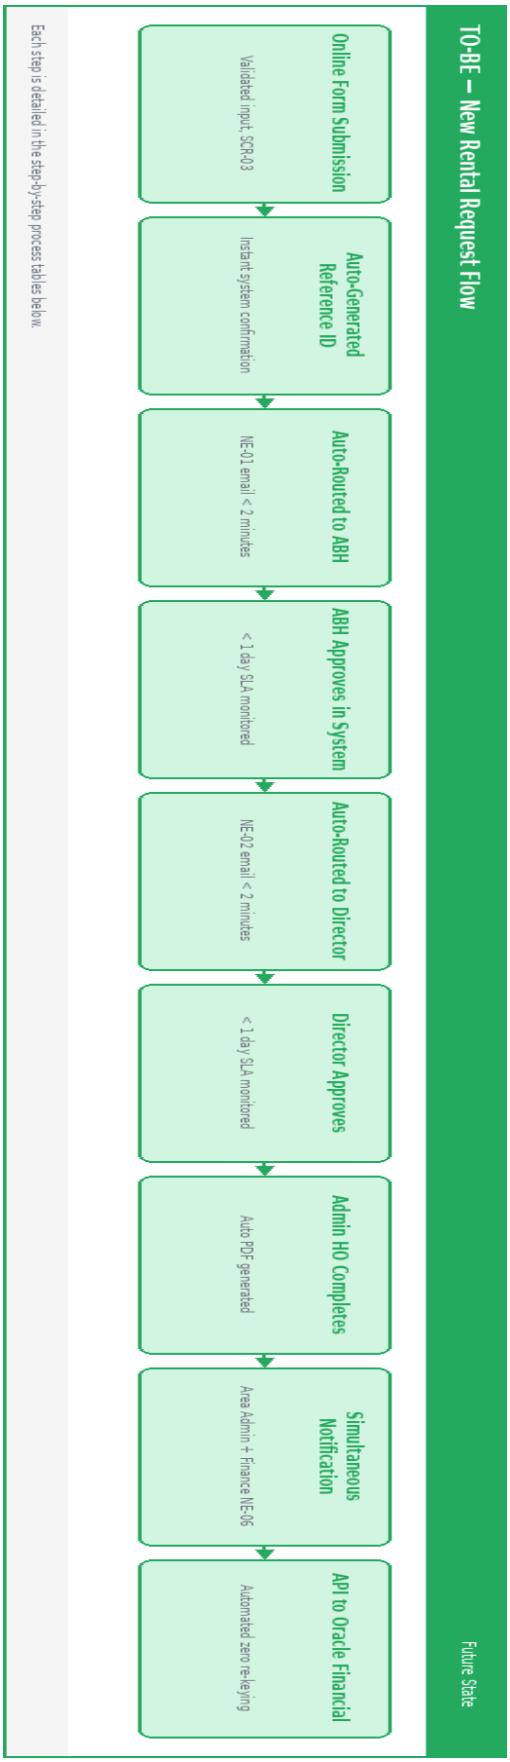
The new rental request process covers every step from the initial submission by an Area Officer through the four-level approval chain (ABH, Director, Admin Head Office, Finance) to agreement completion and Oracle Financial payment setup.

4.1 Flow Diagrams

As-Is Flow — New Rental Request



To-Be Flow — New Rental Request



4.2 Step-by-Step Side-by-Side Comparison

Each row below represents the same step in both states. Where the As-Is step is eliminated in the To-Be design, the To-Be column shows the automated replacement. Steps that are entirely new in the To-Be design (not present in As-Is) are noted accordingly.

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
1	Area Officer completes a paper-based request form and attaches supporting documents. Form design varies by area, causing inconsistent data.	**1-2 days**	No mandatory field enforcement. Incomplete submissions are returned, adding days to the cycle.	Area Officer completes a structured online form (SCR-03) with mandatory field validation and inline error checking. Documents are uploaded directly.	**< 1 hour**	Standardized mandatory fields prevent incomplete submissions. All uploads are validated for file type and size at entry.
2	Area Officer physically delivers or emails the form package to the ABH office. No acknowledgement of receipt is issued.	**0.5-1 day**	Area Officer has no confirmation the ABH received the request. Follow-up by phone or email is required.	The system auto-generates a unique Reference ID (REQ-YYYY-NNNNNN), persists the record, and dispatches an action-required email to the mapped ABH within 2 minutes.	**< 2 min**	Area Officer receives immediate on-screen confirmation and email with the Reference ID. No manual delivery.
3	ABH reviews the request manually by checking physical property and landlord records. No SLA is enforced.	**2-5 days**	Requests sit in ABH inbox for days without action. No escalation mechanism exists when ABH is unavailable.	ABH reviews the request via the Approval Queue (SCR-04) or directly from the email link. SLA timer runs from submission.	**< 1 working day**	SLA breach notification sent automatically to ABH's manager if the deadline is missed. No manual chase required.
4	ABH emails an approval or rejection to the Area Officer and forwards the document package to the Director Office.	**1 day**	Email chain grows with each forward. Document version control is lost. Rejection remarks are informal and unrecorded.	On ABH approval: system updates status to PENDING_DIRECTOR and dispatches email to Director within 2 minutes. On rejection: remarks are mandatory, recorded, and sent to Area Officer in a structured notification.	**< 2 min**	No manual relay. Director receives the full request detail via a direct link. Rejection reason is recorded in the audit trail.

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
5	Director reviews forwarded documents and emails a decision back to ABH.	**2-4 days**	No structured review checklist. Rejections are communicated in free-text email with no standard reason format.	Director reviews the request in SCR-05. All context is in the system. Approves or rejects with mandatory remarks.	**< 1 working day**	SLA monitored. All documents are in the system. No email attachments to open or lose.
6	ABH manually forwards Director approval to Admin Head Office via email with the full document package re-attached.	**0.5 day**	Another manual relay step with no tracking. Documents are re-attached, risking version mismatch.	On Director approval: system automatically updates status to PENDING_ADMIN_HO and notifies Admin HO within 2 minutes. On rejection: ABH and Area Officer are notified simultaneously.	**< 2 min**	Parallel rejection notification ensures both parties are informed at the same time rather than sequentially.
7	Admin HO manually checks documents, inputs details into a local spreadsheet, prepares the agreement, and prints for signature.	**3-5 days**	Spreadsheet data entry is error-prone. Agreement format varies across areas. No standard template is enforced.	Admin HO reviews documents in the system. Fields are pre-populated from the original submission. Admin HO makes targeted edits only and clicks Mark as Completed.	**< 1 working day**	Approval Summary PDF is auto-generated at completion. No manual document assembly required.
8	Admin HO separately emails Finance with payment details extracted manually from the spreadsheet.	**0.5 day**	Finance receives incomplete information. Tax rate and effective date are frequently missing or incorrect.	On completion, the system simultaneously dispatches a structured notification to Area Admin (to download the agreement package) and Finance (with all agreement payment fields in a structured format).	**< 2 min**	Both parties notified at the same time. Finance receives all required payment fields in a structured format. No manual extraction from email.
9	Finance manually creates a payment record in Oracle Financial by re-keying	**1-2 days**	Manual data entry introduces transcription	The system transmits payment details directly to Oracle Financial via API integration.	**< 5 min**	Zero manual Finance data entry for standard

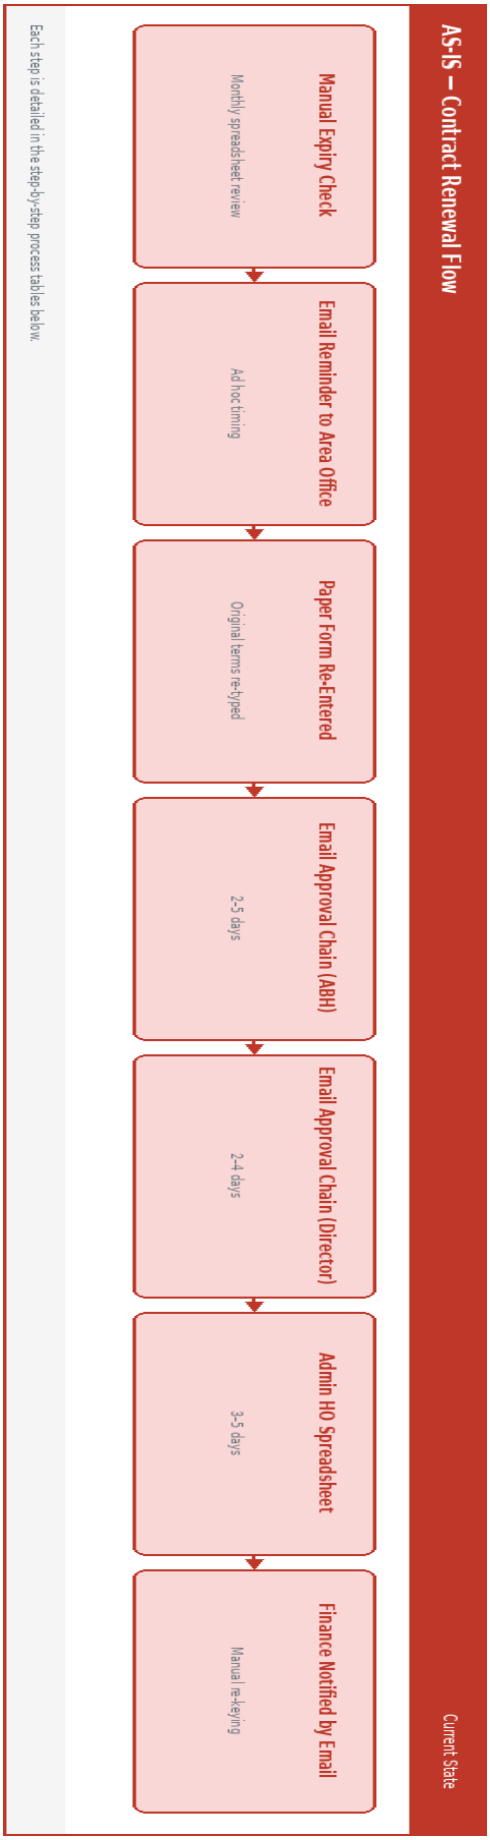
Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
	data from the notification email.		errors. Tax rate and effective date fields are frequently entered incorrectly.	Finance receives the notification for awareness but does not re-key data.		agreements. Transcription errors are eliminated. Oracle Financial confirms receipt.
10	No centralized status tracking exists. Status enquiries are handled by email or phone follow-up.	**Ad hoc**	No audit trail. Total average cycle time: 12 to 21 working days.	All parties can view real-time request status in the system. Full approval history with timestamps is recorded against each request.	**Instant**	Total target cycle time: 3 to 5 working days. Reduction of approximately 75%.

5. Process 2 — Contract Renewal

The contract renewal process covers the identification of expiring agreements and the processing of a renewal through the same four-level approval chain as a new request.

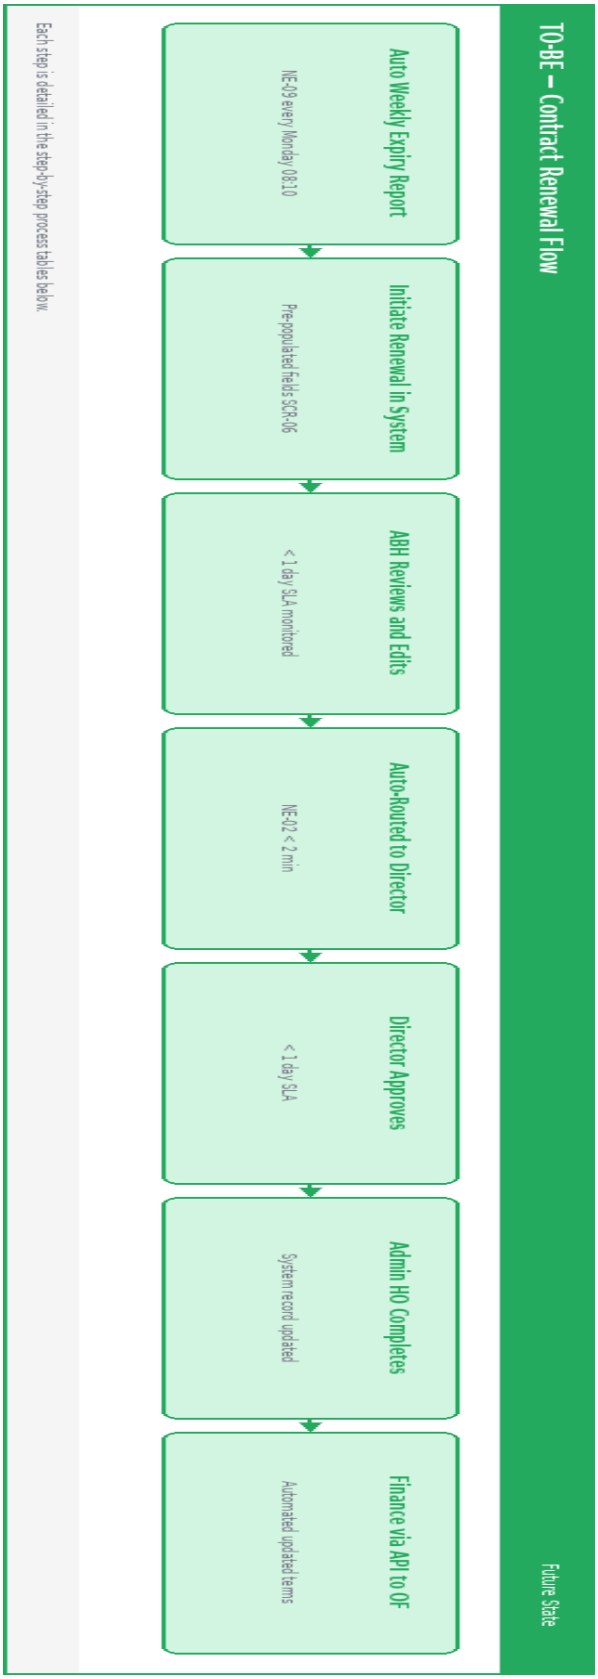
5.1 Flow Diagrams

As-Is Flow — Contract Renewal



AS-IS — Contract Renewal Flow
Current State
Manual Expiry Check
Monthly spreadsheet review
Email Reminder to Area Office
Ad hoc timing
Paper Form Re-Entered
Original terms re-typed
Email Approval Chain (ABH)
2–5 days
Email Approval Chain (Director)
2–4 days
Admin HO Spreadsheet
3–5 days
Finance Notified by Email
Manual re-keying
Each step is detailed in the step-by-step process tables below.

To-Be Flow — Contract Renewal



5.2 Step-by-Step Side-by-Side Comparison

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
1	Admin HO manually reviews a spreadsheet of active agreements each month to check for approaching expiry dates.	**1-2 days/ month**	Spreadsheet is not always current. Agreements have expired before renewal was initiated due to missed review cycles.	System automatically generates and dispatches a weekly expiry report every Monday listing all agreements expiring within 90 days. The look-ahead window is configurable.	**Automated**	No staff time required for expiry monitoring. No agreement can be missed. 90-day window gives sufficient time to initiate and complete renewal before expiry.
2	Admin HO sends an ad hoc email to the relevant Area Office notifying them a renewal is due.	**0.5 day**	No standardized look-ahead period. Reminders depend on the individual admin's diligence and availability.	Admin or Area Office opens the Renewal and Expiry Report (SCR-06) in the system, identifies the expiring agreement, and clicks Initiate Renewal.	**< 30 min**	Structured report replaces informal email. Any authorized user can initiate a renewal directly from the report view.
3	Area Office initiates a renewal by completing a new paper form referencing the expiring agreement. Original terms must be manually re-entered.	**1-2 days**	Re-entering original agreement terms introduces transcription errors and inconsistencies against the original record.	The system pre-populates the renewal form with the existing agreement terms. ABH or Area Office reviews, edits if necessary, adds mandatory remarks, and submits.	**< 1 hour**	New Reference ID is auto-generated and cross-referenced to the original agreement. Pre-populated fields eliminate re-entry risk.
4-7	Same approval chain as a new request (ABH, Director, Admin HO) conducted entirely via email with the same delays and risks.	**8-14 days**	Same email relay delays. No cross-reference to original agreement.	Same structured approval chain via the system with automated routing, SLA monitoring, and notifications. If rejected at any stage, status is	**2-4 working days**	Rejection notifies all parties at once. The system cross-references the

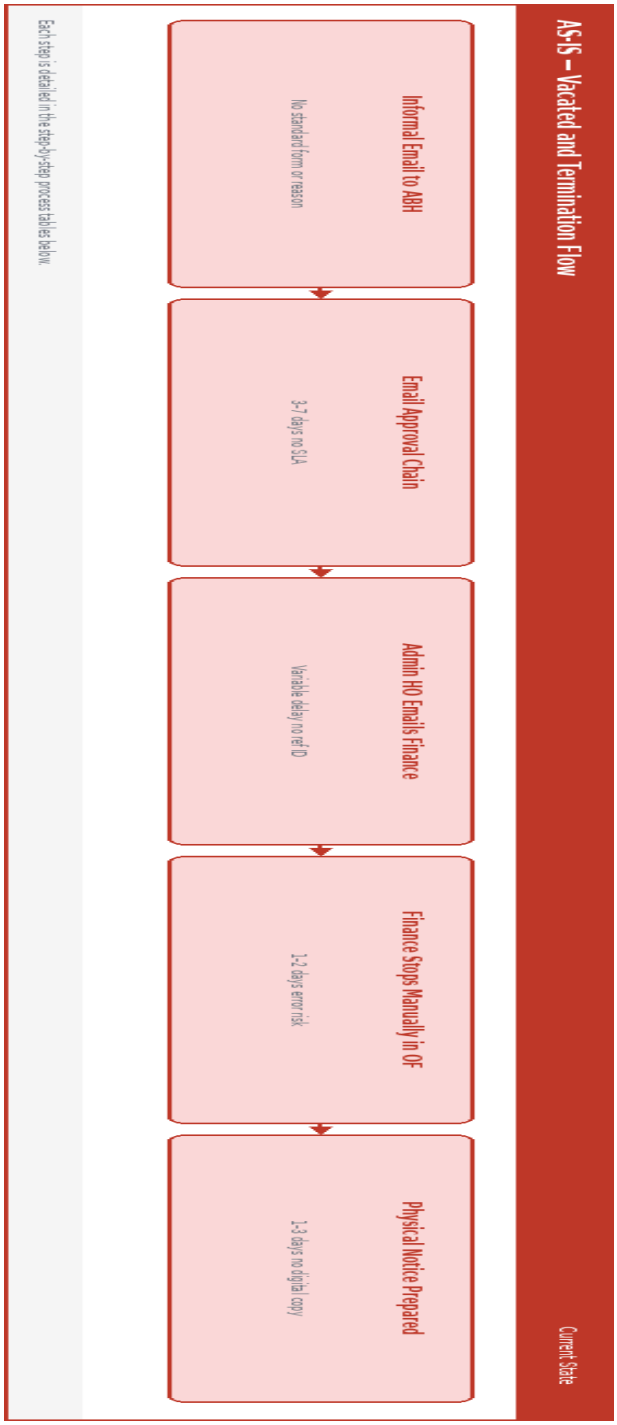
Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
			Finance may continue applying old payment terms if not promptly notified.	set to Closed and all parties are notified simultaneously.		original agreement throughout the approval chain.
8	Finance receives updated payment details via email and manually updates Oracle Financial with the new rental terms.	**1-2 days**	If Finance is not notified promptly, old payment terms continue to be applied, causing overpayment or underpayment.	On completion, the system updates the agreement record and notifies Finance via a structured notification with the updated lease terms. Oracle Financial is updated via API.	**< 5 min**	Finance receives updated payment terms automatically. Zero risk of old terms continuing after renewal completion.

6. Process 3 — Vacated and Termination

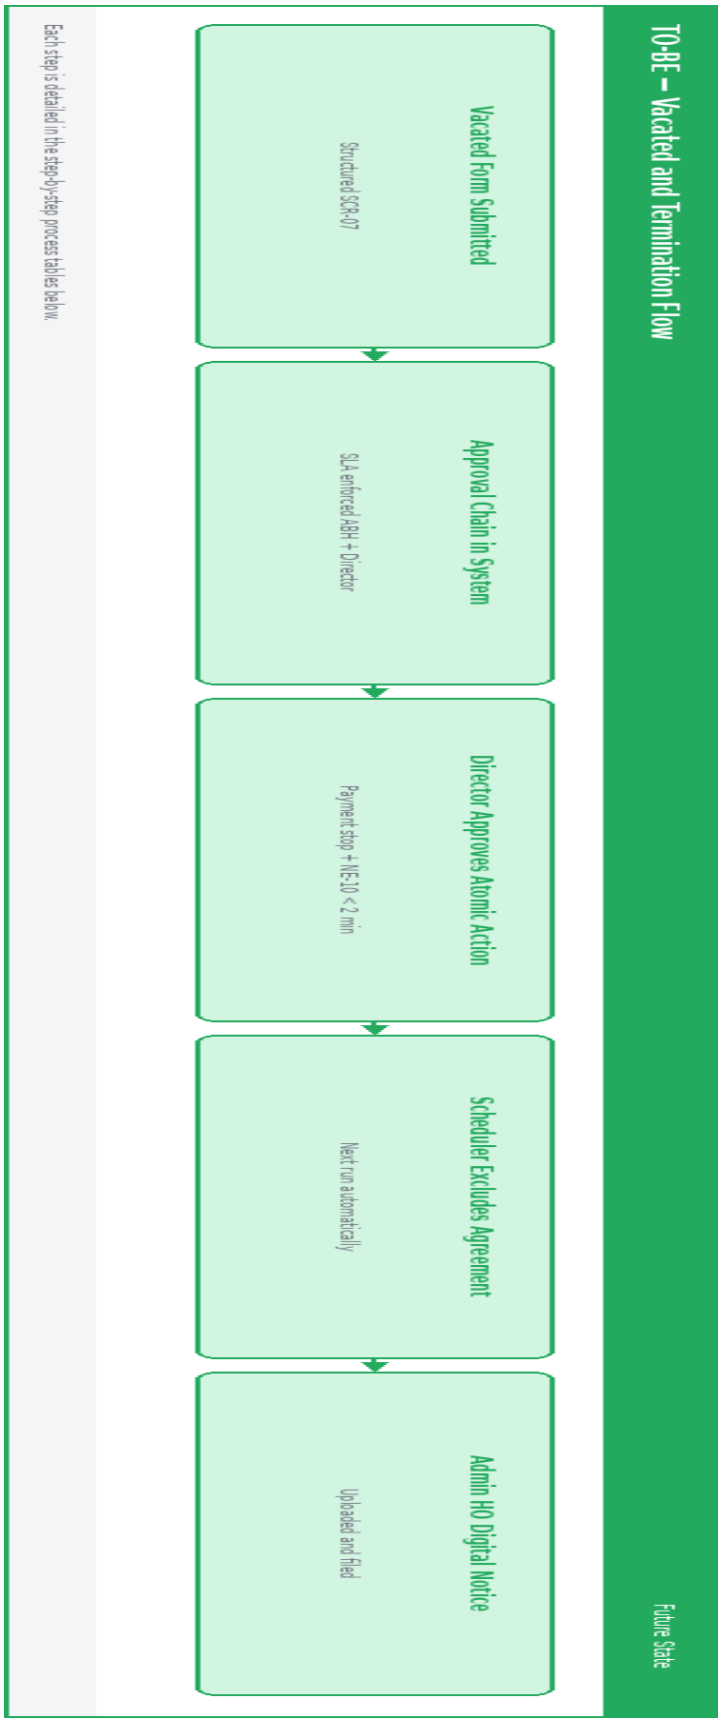
The vacated and termination process covers the initiation, approval, and execution of a rental agreement termination, including the stop-payment instruction to Finance and the issuance of a formal vacated notice.

6.1 Flow Diagrams

As-Is Flow — Vacated and Termination



To-Be Flow — Vacated and Termination



Each step is detailed in the step-by-step process tables below.

6.2 Step-by-Step Side-by-Side Comparison

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
1	Area Admin raises the need for a termination by emailing ABH with an informal notice and termination date. No standard form exists.	**0.5-1 day**	Termination date and reason are not consistently captured. There is no formal record that the termination request was made.	Area Admin opens the Vacated Request form (SCR-07), enters the termination date (validated as not in the past), reason, and uploads supporting documents. Submits.	**< 1 hour**	All required fields are captured in a structured format. Termination date validation prevents backdating errors.
2	ABH reviews the email and forwards approval to the Director and then Admin HO via a chain of email replies.	**3-7 days**	Same approval delays as a new request with no SLA enforcement and no formal record of each approver's decision.	System routes the request through the standard approval chain (ABH, Director, Admin HO) with automated notifications and SLA monitoring.	**1-3 working days**	All approvals are recorded in the audit trail. SLA timers enforce response deadlines at each stage.
3	Admin HO emails Finance manually to stop the landlord payment after all approvals are complete.	**0.5-1 day**	Delay between Director approval and Finance notification is variable. Finance has continued payments for vacated properties due to delayed notification in multiple instances.	On Director approval: the system atomically sets the payment stop flag AND dispatches an urgent notification to Finance within 2 minutes, containing agreement ID, landlord details, and last payment date.	**< 2 min**	Payment stop and Finance notification are a single atomic operation. If either fails, the entire operation rolls back. No risk of Finance being notified without the flag being set, or vice versa.
4	Finance manually locates and stops the payment in Oracle Financial.	**1-2 days**	Finance receives the instruction via email with no formal	The system removes the agreement from the next payment scheduler run automatically. The scheduler checks the payment stop flag	**Automated**	No Finance action required to stop the payment. It is blocked at

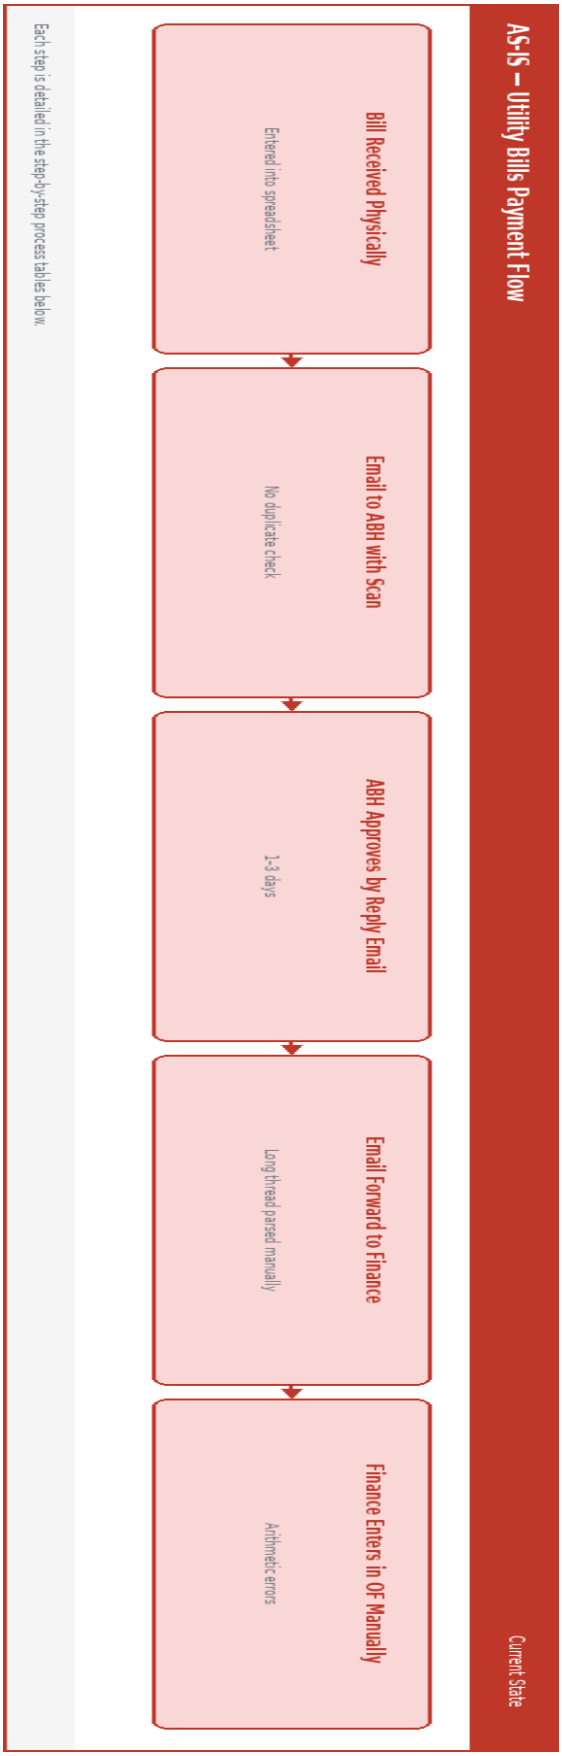
Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
			reference ID, making it difficult to match to the correct agreement in Oracle Financial.	before generating entries.		source in the next payment run. Finance notification contains the agreement ID and landlord ID for reference in Oracle Financial.
5	Admin HO prepares a physical vacated notice and mails or hands it to the landlord. No digital copy is filed.	**1-3 days**	Notices are sometimes lost, creating disputes with landlords over termination dates and the effective date of the vacated agreement.	Admin HO issues the formal vacated notice in the system, uploads the scanned signed copy, and marks the request as Completed. The digital copy is filed against the request.	**< 1 day**	Digital copy is filed immediately against the request record. Both Admin HO and the landlord have a shared reference. No risk of document loss.

7. Process 4 — Utility Bills Payment

The utility bills payment process covers the submission, duplicate checking, approval, and Finance notification for utility bills (Electricity, Gas, and Water) against active rental agreements.

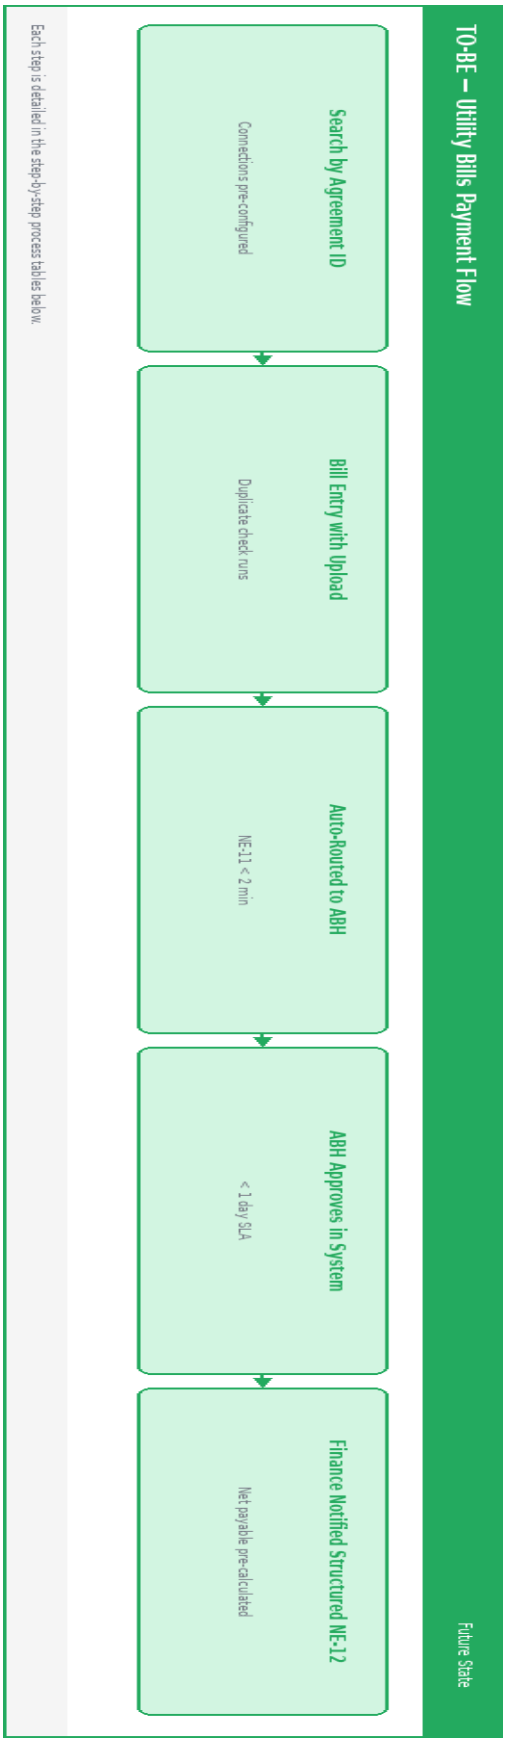
7.1 Flow Diagrams

As-Is Flow — Utility Bills Payment



AS-IS – Utility Bills Payment Flow
Current State
Bill Received Physically
Entered into spreadsheet
Email to ABH with Scan
No duplicate check
ABH Approves by Reply Email
1–3 days
Email Forward to Finance
Long thread parsed manually
Finance Enters in OF Manually
Arithmetic errors
Each step is detailed in the step-by-step process tables below.

To-Be Flow — Utility Bills Payment



7.2 Step-by-Step Side-by-Side Comparison

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
1	Area Officer receives utility bills physically or by post. Bill details are manually entered into a local spreadsheet.	**0.5-1 day**	Bills are not consistently filed. Some are entered late or missed entirely, causing payment delays and in some cases utility service disruption.	Area Officer searches by Agreement ID or Landlord ID in the Utility Bills screen. The system displays all pre-configured utility connections for the agreement.	**< 10 min**	All utility connection details (consumer number, meter number, type) are pre-configured against the agreement at setup. No manual lookup required.
2	Area Officer emails ABH with the utility bill details and a scanned copy of the bill.	**0.5 day**	No duplicate check. Duplicate bill submissions for the same agreement and period go undetected and result in double payments.	Area Officer enters the billing period, units consumed, bill amount, advance tax, and uploads the scanned bill. The system runs a server-side duplicate check before accepting submission.	**< 20 min**	Net payable is calculated automatically by the system. If a bill for the same agreement, type, and period already exists, submission is blocked with a clear error message.
3	ABH reviews the email and scanned bill and replies with approval.	**1-3 days**	No SLA enforcement. Finance receives instructions from a long email thread rather than a structured payment notification. Advance tax is frequently omitted.	ABH reviews the bill via the approval queue or email notification link and approves or rejects with mandatory remarks.	**< 1 working day**	SLA monitored. Finance receives a structured notification with bill ID, net payable, and payment due date immediately on ABH approval.

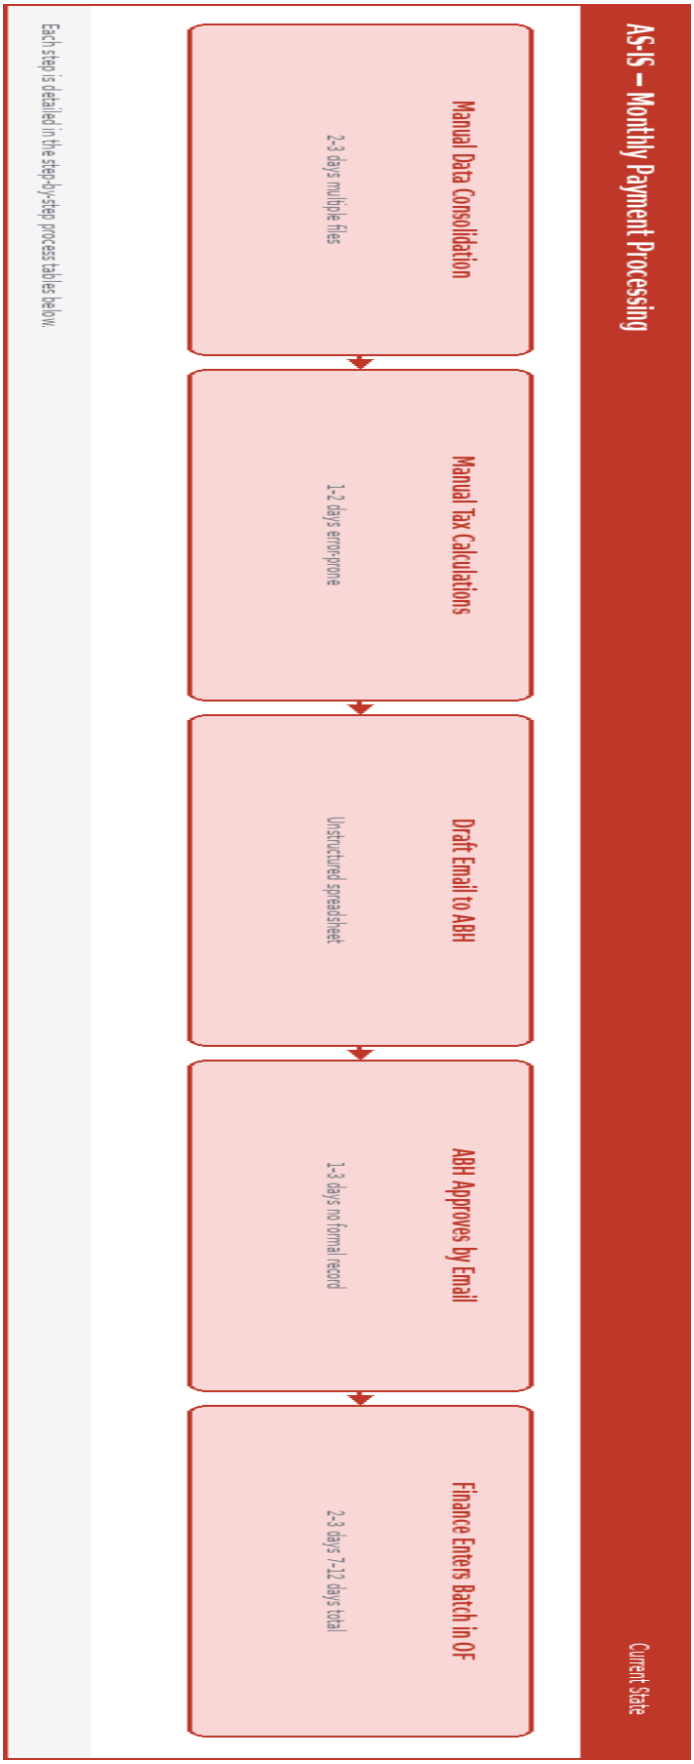
Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
4	ABH forwards the approval email chain to Finance for payment processing.	**0.5 day**	Finance must parse a long email thread to extract the bill amount, advance tax, and net payable. Key amounts are sometimes buried in the chain.	Finance reviews the structured Finance notification and processes the utility payment in Oracle Financial using the pre-calculated payment details.	**< 1 working day**	Finance receives all required fields in a structured format. No email thread to parse. Advance tax and net payable are pre-calculated by the system.
5	Finance manually calculates net payable and creates a payment entry in Oracle Financial.	**1-2 days**	Manual calculation introduces arithmetic errors. Advance tax is frequently omitted from the Oracle Financial payment entry.	Step eliminated. Finance uses the net payable figure from the system notification directly in Oracle Financial.	**Eliminated**	100% elimination of manual calculation step. All arithmetic is system-performed.

8. Process 5 — Monthly Payment Processing

The monthly payment process covers the end-of-month generation of the consolidated payment summary, ABH approval, transmission to Oracle Financial, and payment release. This is the highest-volume, highest-risk process in the division.

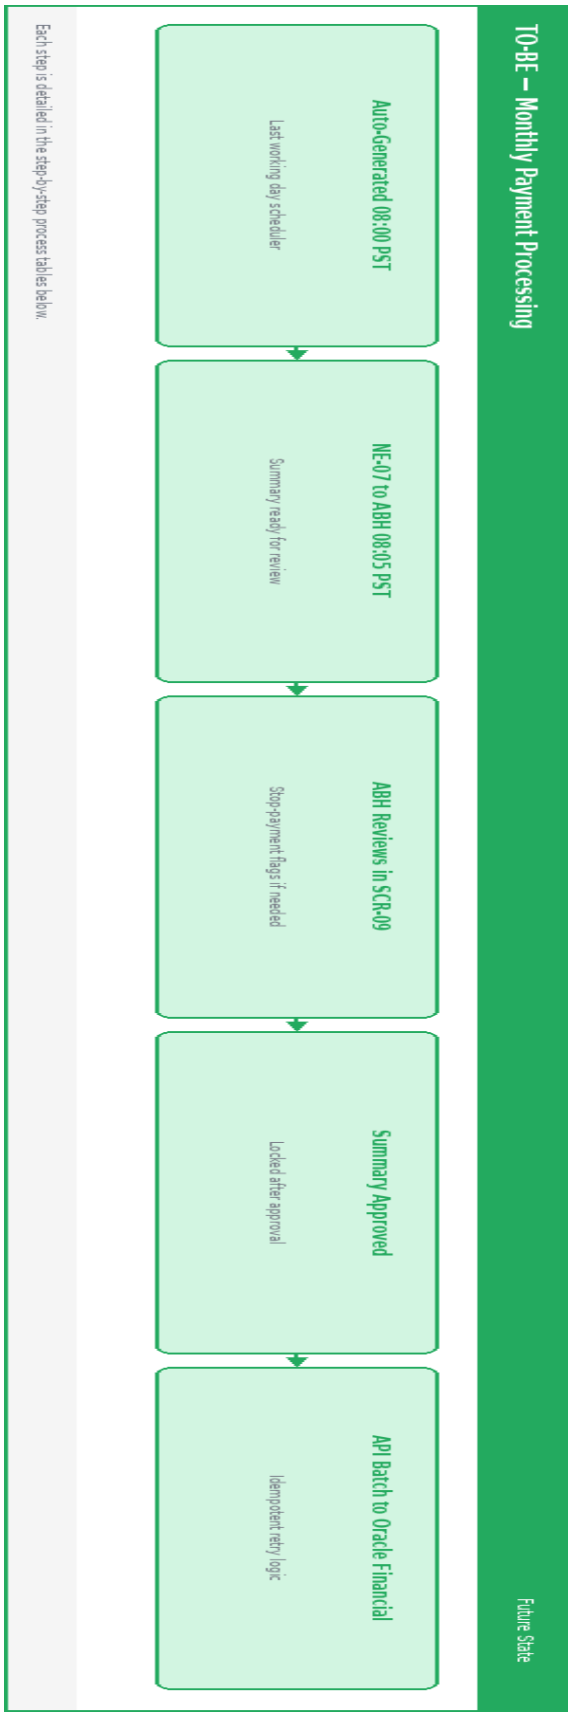
8.1 Flow Diagrams

As-Is Flow — Monthly Payment Processing



AS-IS – Monthly Payment Processing
Current State
Manual Data Consolidation
2-3 days multiple files
Manual Tax Calculations
1-2 days error-prone
Draft Email to ABH
Unstructured spreadsheet
ABH Approves by Email
1-3 days no formal record
Finance Enters Batch in OF
2-3 days 7-12 days total
Each step is detailed in the step-by-step process tables below.

To-Be Flow — Monthly Payment Processing



8.2 Step-by-Step Side-by-Side Comparison

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
1	Finance manually consolidates all active rental agreements from multiple spreadsheets maintained independently by different Area Offices.	**2-3 days**	Data consolidation is error-prone. Agreements are sometimes included twice or omitted. The process begins late because source spreadsheets are submitted late by area offices.	At 08:00 PST on the last working day of the month, the scheduler automatically queries all active agreements with payment not stopped, calculates all figures, and generates the consolidated monthly payment summary.	**Automated**	Eliminates 2 to 3 days of manual consolidation. All calculations use the tax rate stored against each agreement. Finance does not need to collect data from area offices.
2	Finance manually calculates gross rental amount, tax deduction, and net payable for each landlord in the spreadsheet.	**1-2 days**	Calculation formulas in spreadsheets are inconsistently applied. Tax rate errors occur when agreement-level rates differ from the default.	All calculations are system-performed at summary generation. Gross amount, tax deduction, and net payable are computed per agreement using the stored tax rate.	**Automated**	Eliminates manual calculation entirely. System-applied calculations are consistent and auditable. No spreadsheet formula errors.
3	Finance emails the draft payment list to ABH for review as an unstructured spreadsheet attachment.	**0.5 day**	ABH receives an unstructured spreadsheet with no mechanism to flag individual stop payments within the same document.	ABH receives an action-required notification (NE-07) by 08:05 PST and reviews the payment summary in SCR-09. Stop-payment flags can be set per row with a mandatory reason.	**< 2 min**	Structured review interface. Stop-payment instructions are recorded in the system with a mandatory reason. The approved summary is locked after approval.

Step	As-Is — Action			To-Be — Action		
	Action / Description	Time	Issue	Action / Description	Time	Improvement
4	ABH reviews and replies by email to approve or to note stop-payment requests.	**1-3 days**	No formal approval record. Stop-payment instructions are communicated in free-text email and can be missed by Finance.	ABH clicks Approve Summary in SCR-09. Finance receives an action-required notification (NE-08) with a download link to the approved report within 2 minutes.	**< 1 working day**	Approval is recorded in the system with ABH user ID and timestamp. Summary is locked. Finance receives a structured notification with total figures and a direct download link.
5	Finance manually creates payment batch entries in Oracle Financial by re-keying from the approved spreadsheet.	**2-3 days**	Manual batch entry is the highest-risk step in the process. Errors require correction entries in Oracle Financial. Total month-end cycle: 7 to 12 working days.	The system transmits the approved payment batch to Oracle Financial via API with an idempotency key and automatic retry logic (3 retries at 10-minute intervals).	**< 5 min**	Zero manual Finance data entry for payment batch. Idempotency key prevents duplicate transmission on retry. Total target cycle: 1 to 2 working days.
6	Finance simultaneously enters expense accrual entries manually in Oracle Financial for ledger recording.	**Included above**	Accrual entries are frequently entered after the payment entries due to time pressure, causing ledger timing discrepancies.	The system simultaneously pushes expense accrual entries to Oracle Financial via a separate API call when the payment batch is transmitted.	**Automated**	Accrual and payment entries are transmitted at the same time. Ledger timing discrepancies are eliminated.

9. Gap Analysis

The following gaps were identified across all five process areas. Each gap is mapped to its root cause, business impact, and the system resolution implemented in the To-Be design.

Gap ID	Current State Issue	Root Cause	Business Impact	Resolution in To-Be
GAP -01	No centralized system of record for rental agreements	Agreement data is distributed across local spreadsheets maintained independently by each Area Office with no version control.	Discrepancies between area and Finance records cause payment errors. Reconciliation takes 1 to 3 days per incident.	Single agreement record per landlord and property. All teams access the same version in real time through the system.
GAP -02	Manual approval routing via email with no SLA enforcement	Approval requests are forwarded by email with no mechanism to alert approvers or their managers if a request is not actioned.	Average approval cycle is 12 to 21 working days. Agreements lapse before approval is obtained.	Automated multi-level routing with configurable SLA timers. SLA breach notifications are sent automatically to the relevant manager.
GAP -03	No structured rejection mechanism with mandatory remarks	Rejections are communicated in free-text email. No minimum information is required from the approver.	Area Officers cannot determine what corrective action is needed. Requests are resubmitted with the same errors, adding further delays.	Rejection requires a mandatory remarks entry. The reason is recorded in the audit trail and communicated via a structured notification.
GAP -04	Agreement expiry not monitored proactively	Admin HO manually checks a spreadsheet monthly to identify approaching expiry dates with no automated alert mechanism.	Agreements have expired before renewal was initiated. Lapsed agreements create legal and financial exposure.	Configurable expiry look-ahead report with a default of 90 days. Weekly automated notification sent every Monday to Admin and ABH.
GAP -05	No duplicate check for utility bill submissions	Area Officers submit utility bills by email. ABH has no visibility of whether the same bill has already been submitted and approved.	Duplicate utility bill payments have occurred. Identifying and reversing duplicate Oracle Financial entries requires 2 to 5 days per incident.	Server-side duplicate check on submission. If a bill for the same agreement, type, and period already exists with a status other than Rejected, submission is blocked.

Gap ID	Current State Issue	Root Cause	Business Impact	Resolution in To-Be
GAP -06	Payment stop for vacated properties is delayed	Finance is notified of a termination by an informal email from Admin HO after all approvals are complete. Timing is inconsistent.	Rental payments have continued to be disbursed for agreements terminated 2 to 6 weeks prior. Recovering overpaid amounts from landlords is operationally difficult.	On Director approval, the system atomically sets the payment stop flag and dispatches an urgent notification to Finance within 2 minutes. Payment generation stops immediately.
GAP -07	Month-end payment consolidation is entirely manual	Finance consolidates payment data from multiple area spreadsheets at month-end. This takes 2 to 3 days before figures can be presented to ABH.	Late consolidation pushes payment release to the final working days of the month, increasing error risk under time pressure.	The system auto-generates the monthly payment summary on the last working day of the month. ABH receives the summary immediately. Finance receives the approved report with a download link.
GAP -08	No digital archive of agreements and process documents	Physical documents are stored in local offices. Admin HO does not always receive a copy.	Documents are lost or damaged. When landlords dispute agreement terms, the original signed document cannot always be located.	All documents are uploaded at submission and stored in a central digital repository, linked to their respective request records.
GAP -09	Finance re-keys agreement data from email into Oracle Financial	Finance receives a notification email after agreement completion and manually re-enters the agreement details into Oracle Financial.	Manual data entry introduces transcription errors. Tax rate and effective date fields are frequently incorrect.	On agreement completion, the system transmits payment details directly to Oracle Financial via API. Finance does not re-key data.
GAP -10	No audit trail for approvals or data changes	There is no record of who approved a request, when they approved it, or what the original data looked like before changes.	In the event of a dispute or internal audit, the organization cannot demonstrate the approval chain for any agreement.	All operations are logged in an append-only audit trail with user ID, timestamp, and before and after values. The full approval history is viewable by authorized roles.

10. Quantified Improvement Targets

The following targets are based on observed As-Is baselines from process walkthroughs and staff interviews. These should be formally measured at 3 months and 6 months post go-live and reported to the project sponsor.

Process Area	As-Is Baseline	To-Be Target	Improvement	Confidence
New Request — End-to-End Cycle Time	12 to 21 working days (avg 16)	3 to 5 working days (avg 4)	**75% reduction**	High
Approval Time per Stage	2 to 5 days per stage, no SLA	Less than 1 working day, SLA enforced	**60 to 80% reduction per stage**	High
Agreement Expiry Misses	3 to 6 per year (estimated)	Zero (automated 90-day look-ahead)	**100% elimination**	High
Finance Manual Data Entry — Agreements	All payment data re-keyed from email	Zero re-keying via Oracle Financial API	**100% reduction in re-keying effort**	High
Month-End Consolidation Time	7 to 12 working days	1 to 2 working days	**75 to 85% reduction**	High
Duplicate Utility Bill Payments	2 to 5 per quarter (estimated)	Zero (server-side duplicate check)	**100% elimination**	High
Vacated Stop-Payment Notification Lag	2 to 10 working days after Director approval	Less than 2 minutes	**Greater than 99% reduction**	High
Document Retrieval Time	1 to 5 days (physical file search)	Less than 30 seconds (system search)	**Greater than 99% reduction**	High
Approval Audit Trail Coverage	Zero (no formal records)	100% from go-live	**Full coverage established**	High
Finance Transcription Errors — Payment Entry	5 to 10 per month requiring correction	Zero via Oracle Financial API integration	**100% elimination**	Medium
Overall Manual Processing Effort	180 to 220 hours per month (estimated)	50 to 70 hours per month	**65 to 75% reduction**	Medium

11. Implementation Notes

11.1 Change Management

- Staff training covering all five process areas must be completed before go-live. The transition from email-based coordination to a system-enforced workflow requires behavioral change across all roles.
- A parallel-running period of 2 to 4 weeks is recommended for the New Request and Monthly Payment processes. Both the current and new processes are operated simultaneously, with outputs reconciled daily.
- Process champions should be identified in each area office to support adoption and handle day-to-day operational questions after go-live.

11.2 Data Migration

- All active rental agreements as of the go-live date must be migrated into the system before activation. This includes agreement terms, landlord profiles, property profiles, utility connection details, and payment history for the current financial year.
- Migrated data must be reviewed and signed off by Admin Head Office and Finance before the system is activated.
- Historical data (completed agreements, prior year payments) should be handled in a separate migration phase to avoid delaying go-live.

11.3 Oracle Financial Readiness

- API availability, authentication, and field schema mapping must be confirmed at least 8 weeks before go-live.
- A sandbox integration environment must be operational for end-to-end payment batch and accrual entry testing before UAT.
- All ledger account codes, cost centre codes, and payment reference formats must be confirmed by Finance before the integration is developed.

11.4 Post Go-Live Review

- A monthly process review meeting should be held for the first 6 months post go-live, attended by the BA, IT-PMO, Admin Head Office, and Finance.
- Improvement metrics from Section 10 should be measured at 3 months and 6 months and reported to the project sponsor.
- Changes to the approval matrix, SLA thresholds, notification templates, or tax configuration must follow the formal change request procedure.

12. Document Sign-Off

By signing below, stakeholders confirm that the As-Is process maps accurately reflect current operations, that the gap analysis findings are agreed, and that the To-Be process designs are approved as the target model for implementation.

Name and Role	Department	Signature	Date
Business Analyst, IT-PMO	IT-PMO		
Head of Enterprise Architecture, IT-PMO	IT-PMO		
Manager Real Estate	Admin		
Senior Manager Finance	Finance		
Head Business Systems	IT		
Head of Internal Audit	Audit		

Changes to this document after sign-off require a formal Change Request submitted to IT-PMO. The version number will be incremented accordingly.
